

Git Branch – Create, Switch and Delete (Interview Notes)

1. Create a New Branch

git branch

git switch -c

git checkout -b

2. What Happens When You Create a Branch?

New branch is created from current branch

Same files, folders and code

3. List Branches

Local: git branch

All: git branch --all

4. Identify Current Branch

When you run:

git branch or git branch --all

The current branch is shown with an asterisk (*) and usually highlighted in green color.

5. Switching Branches

git switch

6. Auto Switch While Creating

git switch -c

7. Delete Branch

git branch -d

git branch -D

8. Merge Changes

git merge

9. Push Branch to GitHub

git push origin

10. Summary

Create: git switch -c

View: git branch

Switch: git switch

Delete: git branch -d

Merge: git merge

Push: git push origin
