

Git Tags – Professional Interview Notes

1. What is a Tag?

A tag in Git represents a version or release point in the repository history.

2. Purpose of Tags

- 1 Track versions like v1.0, v2.0
- 2 Mark stable release points
- 3 Help in deployment and rollback

3. Types of Tags

Feature	Annotated Tag	Lightweight Tag
Metadata	Yes (author, date, message)	No
Use Case	Official releases	Temporary / quick use
Command	git tag -a <name> -m "msg"	git tag <name>

4. Important Commands

- 1 Create annotated tag: git tag -a v1.0 -m "First release"
- 2 Create lightweight tag: git tag v1.0
- 3 Tag specific commit: git tag v1.0
- 4 List tags: git tag
- 5 Push single tag: git push origin v1.0
- 6 Push all tags: git push origin --tags

5. Interview Tips

- 1 Annotated tags are recommended for releases
- 2 Tags are not pushed automatically
- 3 Use --tags to push all tags
- 4 Lightweight tags are just pointers
